STÆRÐFRÆÐIGREINING IIIA - FORMÚLUBLAÐ

Benedikt Steinar Magnússon

 bsm@hi.is>, https://github.com/benediktmag/formulublad

Stærðfræðigreining I/IA:

I.1. Tölur og föll

$$\begin{array}{lll} \sin^2(x) + \cos^2(x) = 1 & \sin(-x) = -\sin(x) & \cos(-x) = \cos(x) \\ \sin(x \pm y) = \sin(x)\cos(y) \pm \cos(x)\sin(y) & \sin(\pi - x) = \sin(x) & \cos(\pi - x) = -\cos(x) \\ \cos(x \pm y) = \cos(x)\cos(y) \mp \sin(x)\sin(y) & \sin(\pi/2 - x) = \cos(x) & \cos(\pi/2 - x) = \sin(x) \\ \tan(x \pm y) = \frac{\tan(x) \pm \tan(y)}{1 \mp \tan(x) \tan(y)} & \sin^2(x) = \frac{1 - \cos(2x)}{2} & \cos^2(x) = \frac{1 + \cos(2x)}{2} \\ \sin(2x) = 2\sin(x)\cos(x) & \cos(2x) = 2\cos^2(x) - 1 \end{array}$$

I.3. Afleiður

Taylormargliða:

$$P_n(x) = f(a) + f'(a)(x - a) + \frac{f''(a)}{2}(x - a)^2 + \frac{f'''(a)}{3!}(x - a)^3 + \dots + \frac{f^{(n)}(a)}{n!}(x - a)^n.$$

Skekkjumat: $E_n(x) = \frac{f^{(n+1)}(X)}{(n+1)!}(x-a)^{n+1}$.

I.4. Torræð föll

Andhverfur hornafalla

$$\frac{d}{dx}\arcsin(x) = \frac{1}{\sqrt{1-x^2}} \qquad \frac{d}{dx}\arccos(x) = \frac{-1}{\sqrt{1-x^2}} \qquad \frac{d}{dx}\arctan(x) = \frac{1}{1+x^2}$$

Breiðbogaföll

$$\sinh(x) = \frac{e^x - e^{-x}}{2} \qquad \cosh(x) = \frac{e^x + e^{-x}}{2} \qquad \tanh(x) = \frac{\sinh(x)}{\cosh(x)}$$
$$\operatorname{arsinh}(x) = \ln\left(x + \sqrt{x^2 + 1}\right) \qquad \operatorname{arcosh}(x) = \ln\left(x + \sqrt{x^2 - 1}\right) \qquad \operatorname{artanh}(x) = \frac{1}{2}\ln\left(\frac{1 + x}{1 - x}\right)$$

I.6. Heildun

Innsetning:
$$\int f(g(x))g'(x)dx = \int f(u)du \qquad \text{Hluth.: } \int u'(x)v(x)dx = u(x)v(x) - \int u(x)v'(x)dx$$

I.7. Rúmmál, massi og massamiðja

Kúla:
$$V = \frac{4}{3}\pi r^3$$
, $S = 4\pi r^2$.
Sívalningur: $V = \pi r^2 h$, $S = 2\pi r h$.
Keila með grunnflöt A : $V = \frac{1}{3}Ah$.

Snúðar

Snúið um x-ás:

$$V = \pi \int_a^b f(x)^2 dx, \qquad S = 2\pi \int_a^b |f(x)| \sqrt{1 + (f'(x))^2} dx.$$

Snúið um y-ás:

$$V = 2\pi \int_a^b x f(x) dx, \qquad S = 2\pi \int_a^b |x| \sqrt{1 + (f'(x))^2} dx.$$

Lengd grafs: $s = \int_a^b \sqrt{1 + (f'(x))^2} dx$.

Massamiðja plötu

$$\overline{x} = \frac{M_{x=0}}{m} = \frac{\int_a^b x \delta(x) f(x) dx}{\int_a^b \delta(x) f(x) dx} \qquad \overline{y} = \frac{M_{y=0}}{m} = \frac{\frac{1}{2} \int_a^b \delta(x) f(x)^2 dx}{\int_a^b \delta(x) f(x) dx}.$$

I.8. Diffurjöfnur

Línulegar fyrsta stigs diffurjöfnur, y' + p(x)y = q(x)

$$y(x) = e^{-\mu(x)} \int e^{\mu(x)} q(x) dx,$$
 $\mu(x) = \int p(x) dx.$

Línuleg annars stigs diffurjafna með fastastuðla, ay'' + by' + cy = 0

Tilvik I: $y(x) = Ae^{r_1x} + Be^{r_2x}$ ef kennijafnan hefur tvær ólíkar rauntölulausnir r_1 og r_2 . Tilvik II: $y(x) = Ae^{kx} + Bxe^{kx}$ ef kennijafnan hefur eina tvöfalda rauntölulaus
n $k = -\frac{b}{2a}$ Tilvik III: $y(x) = Ae^{kx}\cos(\omega x) + Be^{kx}\sin(\omega x)$ ef kennijafnan hefur engar rauntölulausnir, bara tvinntölulausnir $r_1=k+i\omega$ og $r_2=k-i\omega$ þar sem $k=-\frac{b}{2a}$ og $\omega=\frac{\sqrt{4ac-b^2}}{2a}$

I.9. Runur og raðir

$$\sum_{n=1}^{\infty} \frac{1}{n(n+1)} = 1$$

I.10. Veldaraðir

$$\text{Kv\'otapr\'of:} \quad \frac{1}{R} = L = \lim_{n \to \infty} \left| \frac{a_{n+1}}{a_n} \right| \qquad \text{R\'otarpr\'of:} \quad \frac{1}{R} = L = \lim_{n \to \infty} \sqrt[n]{|a_n|}$$

$$e^x = \sum_{n=0}^{\infty} \frac{x^n}{n!} = 1 + x + \frac{x^2}{2} + \frac{x^3}{3!} + \cdots \qquad \text{fyrir \"oll } x$$

$$\sin x = \sum_{n=0}^{\infty} \frac{(-1)^n}{(2n+1)!} x^{2n+1} = x - \frac{x^3}{3!} + \frac{x^5}{5!} - \frac{x^7}{7!} + \cdots \qquad \text{fyrir \"oll } x$$

$$\cos x = \sum_{n=0}^{\infty} \frac{(-1)^n}{(2n)!} x^{2n} = 1 - \frac{x^2}{2!} + \frac{x^4}{4!} - \frac{x^6}{6!} + \cdots \qquad \text{fyrir \"oll } x$$

$$\frac{1}{1-x} = \sum_{n=0}^{\infty} x^n = 1 + x + x^2 + x^3 + \cdots \qquad \text{fyrir } -1 < x < 1$$

$$\frac{1}{(1-x)^2} = \sum_{n=1}^{\infty} nx^{n-1} = 1 + 2x + 3x^2 + 4x^3 + \cdots \qquad \text{fyrir } -1 < x < 1$$

$$\ln(1+x) = \sum_{n=1}^{\infty} \frac{(-1)^{n-1}}{n} x^n = x - \frac{x^2}{2} + \frac{x^3}{3} - \frac{x^4}{4} + \cdots \qquad \text{fyrir } -1 < x \le 1$$

$$\tan^{-1} x = \sum_{n=0}^{\infty} \frac{(-1)^n}{2n+1} x^{2n+1} = x - \frac{x^3}{3} + \frac{x^5}{5} - \frac{x^7}{7} + \cdots \qquad \text{fyrir } -1 \le x \le 1$$

$$\sinh x = \sum_{n=0}^{\infty} \frac{x^{2n+1}}{(2n+1)!} = x + \frac{x^3}{3!} + \frac{x^5}{5!} + \frac{x^7}{7!} + \cdots \qquad \text{fyrir \"oll } x$$

$$\cosh x = \sum_{n=0}^{\infty} \frac{x^{2n}}{(2n)!} = 1 + \frac{x^2}{2!} + \frac{x^4}{4!} + \frac{x^6}{6!} + \cdots \qquad \text{fyrir \"oll } x$$

fyrir öll x

Mathematical Analysis IIIA:

1. Linear Ordinary Differential Equations

First Order Linear Equations

y' + p(x)y = g(x):

$$y(x) = e^{-M(x)} \left(C + \int g(x) e^{M(x)} \, dx \right), \qquad \text{where } M(x) = \int p(x) dx.$$

Reduction of order

y'' + p(x)y' + q(x)y = 0:

$$u_2(x) = u_1(x) \int \frac{e^{-P(t)}}{u_1^2(t)} dt,$$
 where $P(x) = \int p(x) dx$.

Shift rule

$$P(D)(e^{\lambda x}f(x)) = e^{\lambda x}P(D+\lambda)f(x)$$

Green function

Solution to
$$y^{(n)} + p_{n-1}(x)y^{(n-1)} + \dots + p_1(x)y' + p_0y = g(x), U_1(y) = U_2(y) = \dots = U_n(y) = 0,$$

$$y(x) = \int_a^b G(x,\xi)g(\xi) d\xi.$$

2. Separation of Variables

Newton's equation

Equation: x'' = F(x) or $(\{x' = y, y' = F(x)\})$.

Potential: $U(x) := -\int F(x) dx$.

Energy: $E(x,y) := U(x) + \frac{y^2}{2}$. Period of small oscillations: $\lim_{\epsilon \to 0} L_{\epsilon} = \frac{2\pi}{\sqrt{U''(x_0)}}$.

3. Series Solutions of Linear Equations

Recursive formula for the coefficients at an ordinary point

$$(k+2)(k+1)c_{k+2} + \sum_{j=0}^{k} (k-j+1)a_jc_{k-j+1} + \sum_{j=0}^{k} b_jc_{k-j} = 0.$$

Recursive formula for the coefficients at a regular singular point

$$P(k+\gamma)c_k + \sum_{j=0}^{k-1} ((j+\gamma)a_{k-j} + b_{k-j})c_j = 0, \qquad k \in \mathbb{N},$$

with the understanding that for k = 0 the sum is empty, and the indicial polynomial P is given by

$$P(X) = X(X-1) + a_0X + b_0.$$

4. Existence Theory

Picard iteration

$$\phi_{m+1}(x) = y_0 + \int_{x_0}^x f(t, \phi_m(t)) dt.$$

5. The Exponential of a Matrix

Solution to y' = A(x)y + h(x), $y(x_0) = \eta$ is $y(x) = e^{(x-x_0)A}\eta + \int_{x_0}^x e^{(x-t)A}h(t) dt$.

Newton divided differences

$$F[\lambda_l] = F(\lambda_l), \qquad F[\lambda_l, \dots, \lambda_{l+k}] = \frac{F[\lambda_l + 1, \dots, \lambda_{l+k}] - F[\lambda_l, \dots, \lambda_{l+k-1}]}{\lambda_{l+k} - \lambda_l}.$$

If $\lambda_l = \cdots = \lambda_{k+l}$, then $F[\lambda, \ldots, \lambda_{l+k}] = F^{(k)}(\lambda_l)/k!$.

7. Sturm-Liouville Theory

Sturm-Liouville form

$$Ly = \frac{d}{dx}\left(p(x)\frac{dy}{dx}\right) + q(x)y = g(x).$$

Inner product, norm and Bessel inequality

$$\langle u, v \rangle = \int_a^b u(x) \overline{v(x)} \, dx, \qquad \|u\|_2 = \sqrt{\langle u, u \rangle}, \qquad \sum_{n=1}^\infty |\langle f, \phi_n \rangle|^2 \le \|f\|_2^2.$$

Solutions to non-homogeneous equations

$$Ly - \mu y = h(x), U_1(y) = 0, U_2(y) = 0.$$

If μ not an eigenvalue: $y(x) = \sum_{n=1}^{\infty} (\lambda_n - \mu)^{-1} \langle h, \phi_n \rangle \phi_n(x)$. If μ is an eigenvalue: $y(x) = \sum_{\lambda_n \neq \mu}^{\infty} (\lambda_n - \mu)^{-1} \langle h, \phi_n \rangle \phi_n(x)$.

Fourier Analysis

Fourier series f on [-L, L]: Exponential form:

$$f(x) \sim \frac{c_0}{2} + \sum_{n = -\infty}^{\infty} c_n e^{\frac{inx\pi}{L}},$$

$$c_n = \hat{f}(n) = \frac{1}{2L} \int_{-L}^{L} f(x) e^{-\frac{in\pi x}{L}} dx, \qquad n \in \mathbb{Z}.$$

Fourier series f on [-L, L]: Trigonometric form

$$f(x) \sim \frac{a_0}{2} + \sum_{n=1}^{\infty} a_n \cos\left(\frac{n\pi x}{L}\right) + \sum_{n=1}^{\infty} b_n \sin\left(\frac{n\pi x}{L}\right).$$

$$a_n = \frac{1}{L} \int_{-L}^{L} f(x) \cos\left(\frac{n\pi x}{L}\right) dx, \quad n \ge 0. \qquad b_n = \frac{1}{L} \int_{-L}^{L} f(x) \sin\left(\frac{n\pi x}{L}\right) dx, \quad n \ge 1.$$

Connections between coefficients:

$$c_0 = a_0,$$
 $a_0 = c_0,$ $c_n = (a_n - ib_n)/2,$ for $n > 0,$ $a_n = c_n + c_{-n},$ for $n > 0,$ $c_n = (a_{-n} + ib_{-n})/2,$ for $n < 0.$ $b_n = i(c_n - c_{-n}),$ for $n > 0.$

Solving Ordinary Differential Equations

If P(D)u = f, then $P(in)\hat{u}(n) = \hat{f}(n)$ and

$$u(x) = \sum_{n = -\infty}^{\infty} \frac{\hat{f}(n)}{P(in)} e^{inx}.$$
